household First-come basis ■  
Residents only**

## ***RADON is:***

An odorless, tasteless, invisible gas that occurs naturally in soil.

Produced by natural breakdown of uranium & radium in rocks.

In higher concentrations in certain areas of New Jersey.

Estimated to cause 21,000 lung cancer deaths annually.

Leading cause of lung cancer in non-smokers.

Second leading cause of lung cancer overall.

Blamed for large increases in risk of lung cancer in smokers.

Found to exceed the radon action level of 4 picocuries per liter in high percentage of Somerset County homes. (NJDEP)
